

The brain is the center of the nervous system.

The largest part of the brain is the brain stem.

The cranium or skull protects the brain.

An adult brain weighs about 10 pounds.

Being conscious means being awake.

The brain is separated into six lobes.

The pituitary gland controls growth.

The neurons are in charge of the involuntary actions that occur in our body (i.e., heartbeat)

When our brain stops working, our body shuts down.

Drugs and alcohol do not affect consciousness.
